

I'm not robot!

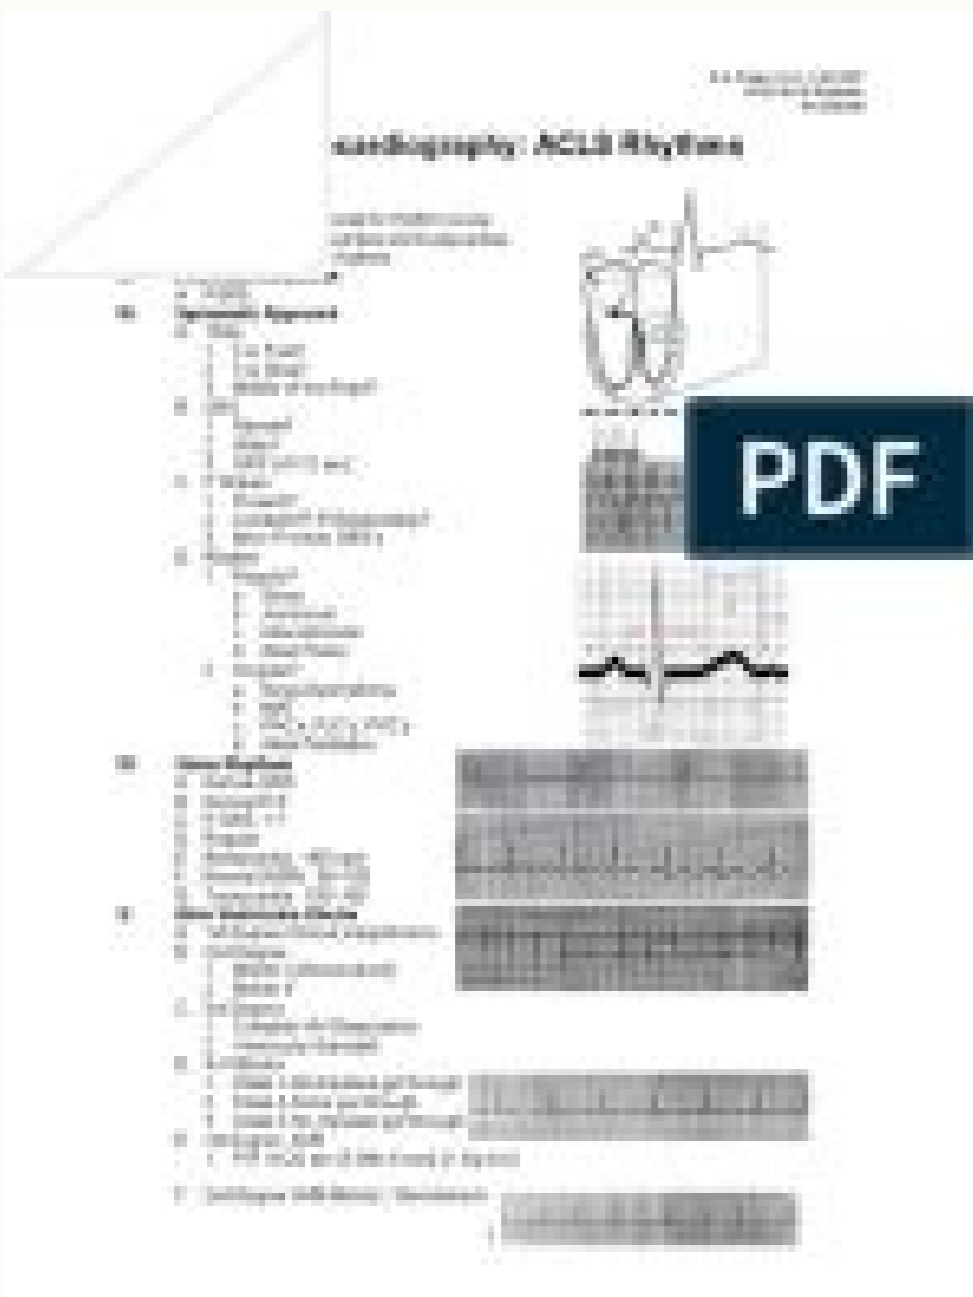

Figure. AED electrode pad placement on the patient.

Troubleshooting the AED

If the AED does not analyze the rhythm, do the following:

- Resume chest compressions and ventilations.
- Check all connections between the AED and the patient.

AED Use on Hairy Chested Patients

If the patient has a hairy chest, the AED pads will stick to the hair and not to the skin, and the AED will not analyze the patient's heart rhythm. The AED will give a "check electrodes" message. If this happens, complete the following steps:

Use of the AED with a Hairy Chest	
Step	Action
1	If the pads stick to the hair, press down firmly on each pad
